

# S-SERVO® II

Stepping motor control system without step out

- Completely free from the Concern of Loss of Position  
(Alarm Feneration when Step-Out)
- Perfect Positioning and Completion  
(Positioning Completion Signal Generation)
- Don't Care what the Phase of Motor is  
(Position Accuracy only Related to Endocer Resolution)
- Reduce the Motor Temperature and Energy Usage  
(Current Control According to load)
- Torque Improvement by Run Current Control  
(Max. 150% Current Control)

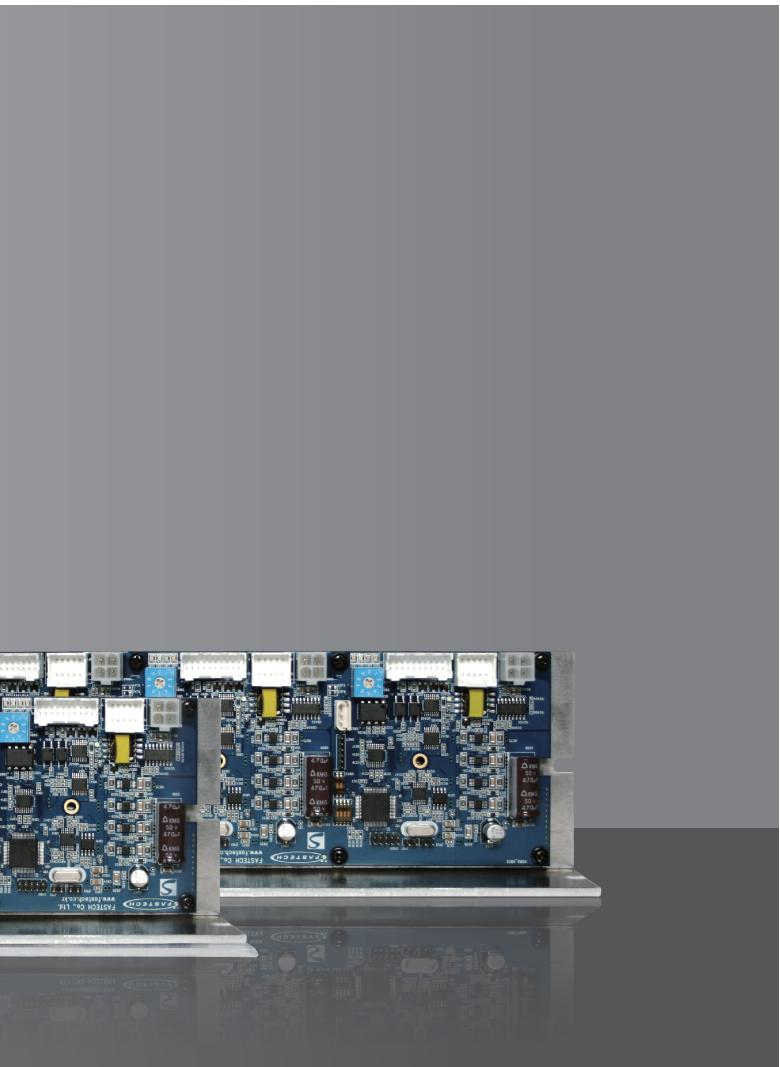

*Fast, Accurate, Smooth Motion*

**S-SERVO<sup>®</sup> II**

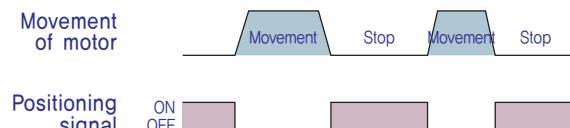

Stepping motor control system without step out

## 2 Perfect Positioning Completion Check

(Positioning completion signal will be generated)

When motor stops at the goal position, encoder detect it and send positioning completion signal to upper controller. Therefore S-SERVO II resolve the problem of unclear positioning of current Open Loop System.

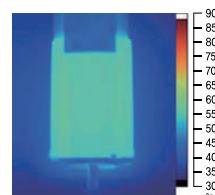

## 3 High Position Accuracy

S-SERVO II controls position by using high precision of encoder. Regardless of motor type (2 Phase or 5 Phase), S-SERVO II position precision is only related to mounted encoder resolution so high precision of positioning is possible unlike open loop micro step motor and driver which adapts 2 Phase or 5 Phase motor.

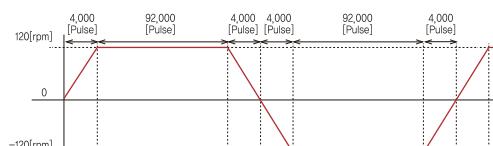

## 4 Heat Reduction / Energy Saving

(Motor Current Control according to load)

S-SERVO II automatically controls motor current according to load. S-SERVO II reduces motor current when motor load is low, and increases motor current when load is high. By optimizing the motor current, motor heat can be minimized and energy can be saved.

Motor temperature [Measured by Thermal Imaging Camera]

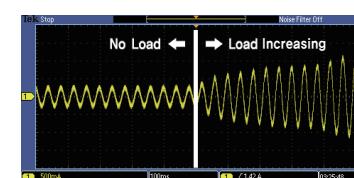

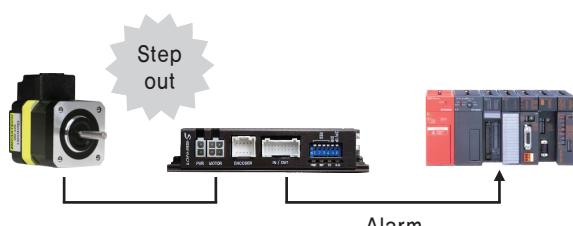

Condition to measure the motor temperature  
[4hours operation, Motor surface temperature saturation]

## 1 No Step Out

(Alarm will be generated when step out)

Because of mounted encoder constantly monitor the current position, step out cannot be occurred. If step out occurred by external force or overloads, alarm signal will be sent to upper controller. Thus, upper controller can recognize step out of step motor.

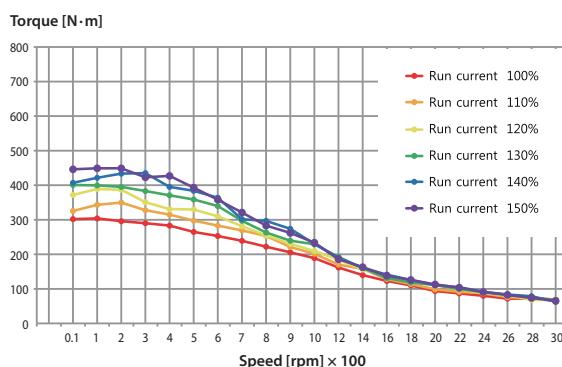

Example of the Motor Current Control according to load

## 5 Torque Improvement

### (Motor Current Setting)

S-SERVO II can increase the motor current up to 150% by setting the Run Current by parameter. Therefore, acceleration and deceleration characteristics and torque characteristics at low speed can be increased.

S-SERVO II can improve the torque in the low speed range by about 30%.

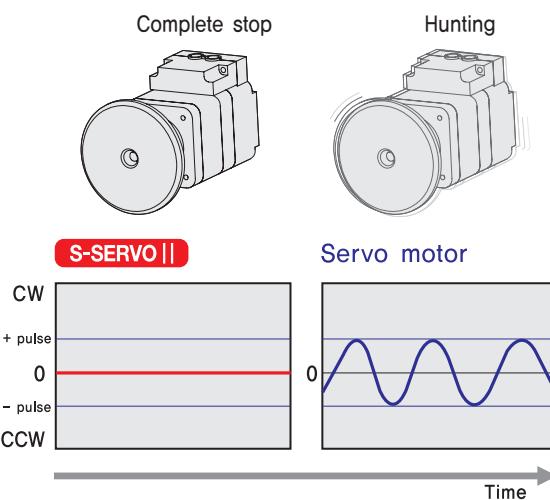

※ The torque at low speed is improved about 30%.

Measured Condition : Drive = S-SERVO II-ST-42L  
Motor Voltage = 24VDC  
Input Voltage = 24VDC

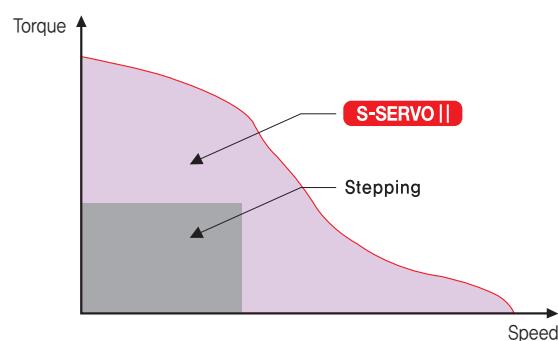

## 6 No Hunting

Traditional servo motor drives overshoot their position and try to correct by overshooting the opposite direction, especially in high gain applications. This is called null hunt and is especially prevalent in systems that the break away or static friction is significantly higher than the running friction. The cure is lowering the gain, which affects accuracy or using S-SERVO II Motion Control System. S-SERVO II utilizes the unique characteristics of stepping motors and locks itself into the desired target position, eliminating Null Hunt. This feature is especially useful in applications such as nanotech manufacturing, semiconductor fabrication, vision systems and ink jet printing in which system oscillation and vibration could be a problem.

## 7 High Torque

Compared with common step motors and drives, S-SERVO II motion control systems can maintain a high torque state over relatively long period of time. This means that S-SERVO II continuously operates without loss of position under 100% of the load. Unlike conventional Microstep drives, S-SERVO II exploits continuous high torque operation during high speed motion due to its innovative optimum current phase control.

## 8 Variety of Protection Functions

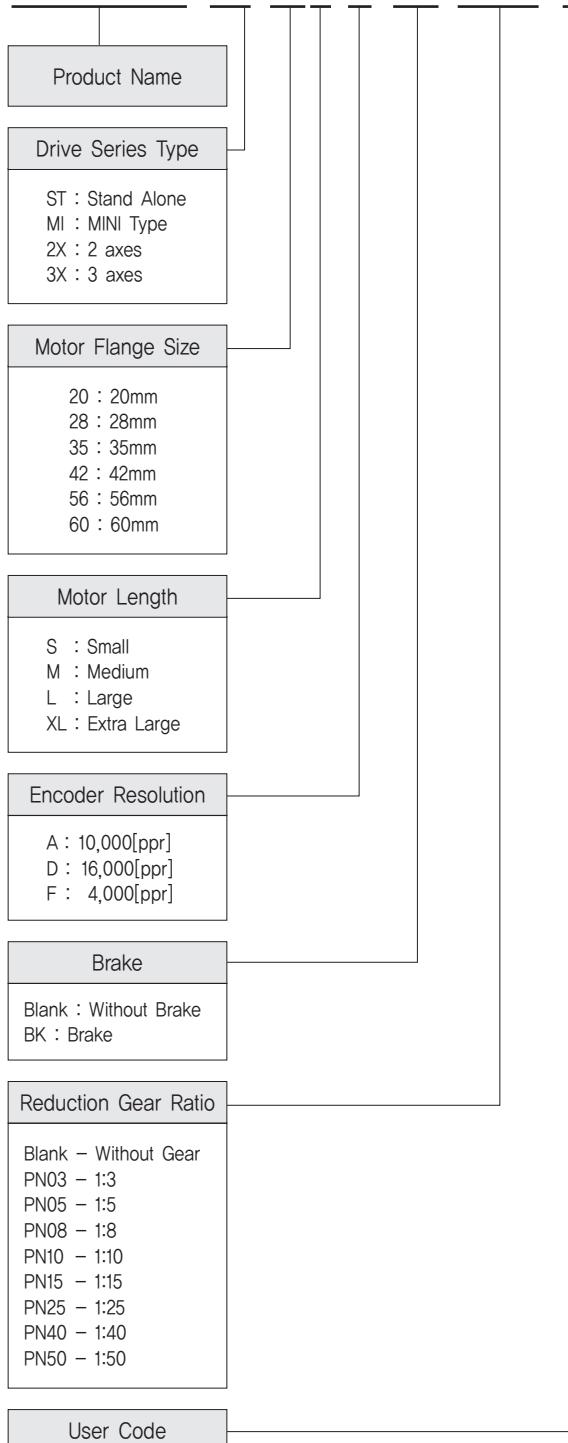

Drive and equipment can be protected by the alarm (11 kinds) of such as motor connection error, encoder connection error etc.

## 9 Variety of Position Command Unit

According to the purpose of usage, S-SERVO II offer 16 stage (500~50,000P/R) of position command unit.

## ● S-SERVO II ST Part Numbering

**S-SERVO II -ST-56L-A-BK-PN05-□**

\* S-SERVO II 2X, S-SERVO II 3X product needs 2 or 3 sets of motors for one drive. Combination of drive and motors can be diversified so please contact with sales division or distributor of FASTECH before purchasing product.

- \* The code of encoder resolution will be marked in “■”
- \* S-SERVO II 2X, S-SERVO II 3X product needs 2 or 3 sets of motors for one drive. Combination of drive and motors can be diversified so please contact with sales division or distributor of Fastech before purchasing product.
- \* Electronic Brake cannot be used for braking. Position hold purpose only when power OFF.
- \* The weight means Motor Unit Weight including Motor and Electronic Brake.
- \* Motor Model Number is combined model name of Motor and Brake.
- \* Motor specification and torque characteristic are same as Standard Motor.

### \* Brake Operation Timing Chart

S-SERVO II control Brake by Drive automatically. Please refer to below Timing Chart when control Brake from upper controller other than using S-SERVO II Brake control. Otherwise, Drive malfunctioning and loads can be fall down. Also, please do not operate Brake while motor operation to prevent damage.

### 1. Drive Status LED

Indication	Color	Function	ON/OFF Condition
PWR	Green	Power input indication	LED is turned ON when power is applied
INP	Yellow	Complete Positioning Motion	Light on when Position Deviation located within preset value*1 from target position, after Position Command Pulse Input is completed
EN	Orange	Motor Enable Status	Enable: Lights On, Disable: Lights Off
ALM	Red	Alarm indication	Flash when protection function is activated (Identifiable which protection mode is activated by counting the blinking times)

\*1 : Default = 0  
Can be selected by parameter setting GUI

### ◆ Protection functions and LED flash times

Times	Protection	Conditions
1	Over Current Error	The current through power devices in drive exceeds 4,8A
2	Over Speed Error	Motor speed exceed 3,000 [rpm]
3	Position Tracking Error	Position error value is higher than 90° in motor run state
4	Over Load Error	The motor is continuously operated more than 5 second under a load exceeding the max. torque
5	Over Temperature Error	Inside temperature of drive exceeds 85°C
6	Over Regenerativd Voltage Error	Back-EMF more than 48V
7	Motor Connect Error	The power is ON without connection of the motor cable to drive
8	Encoder Connect Error	Cable connection error in Encoder connection of drive
10	In-Position Error	After operation is finished, position error more than 1 pulse is continued for more than 3 seconds
12	ROM Error	Error occurs in parameter storage device(ROM)
15	Position Overflow Error	Position error value is higher than 90° in motor stop state

Alarm LED flash

## ● External Wiring Diagram [S-SERVOII 2X]

※ Except common usage of power of S-SERVO II 2X, 3X, external wiring diagram for each drive of motor, encoder and I/O are all same.

※ When connects I/O cable between controller and drive, please turn off the power of both controller and drive, in order to protect the drive from any damage.

### CAUTION

Please refer to the Manual when connects motor extension cable.

Careful connection will be required to protect the drive from any damages.

## ● Specifications of Drive [S-SERVOII 3X]

Driver Model		S-SERVOII-3X
Input Voltage		24VDC ±10%
Control Method		Closed loop control with 32bit ARM
Current Consumption		Max 1.5A (Except motor current)
Operating Condition	Ambient Temperature	· In Use: 0~50°C · In Storage: -20~70°C
	Humidity	· In Use: 35~85% RH (Non-Condensing) · In Storage: 10~90% RH (Non-Condensing)
	Vib. Resist.	0.5g

## ● External Wiring Diagram [S-SERVO II 3X]

### CAUTION

※ Except common usage of power of S-SERVO II 2X, 3X, external wiring diagram for each drive of motor, encoder and I/O are all same.

※ When connects I/O cable between controller and drive, please turn off the power of both controller and drive, in order to protect the drive from any damage.

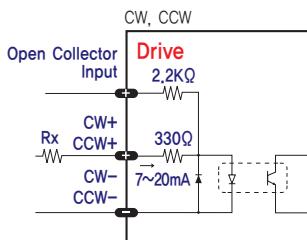

Please refer to the Manual when connects motor extension cable.

Careful connection will be required to protect the drive from any damages.

## ● Control Signal Input/Output Description

### 1 Input Signal

Input signals of the drive are all photocoupler protected. The signal shows the status of internal photocouplers [ON: conduction], [OFF: Non-conduction], not displaying the voltage levels of the signal.

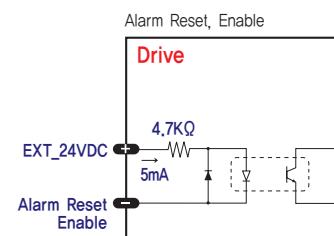

Functions	Pin Number	
	S-SERVO II ST	S-SERVO II MINI
Open Collector Input	15	15
CW+	18	1
CW-	17	2
CCW+	20	3
CCW-	19	4

\* S-SERVO II 2X and 3X's pin number is the same as S-SERVO II ST.

#### ◆ CW, CCW Input

This signal can be used to receive a positioning pulse command from a user host motion controller. The user can select 1-pulse input mode or 2-pulse input mode.

The input schematic of CW, CCW is designed for 5V TTL level. When using 5V level as an input signal, the resistor Rx is not used and connect to the driver directly. When the level of input signal is more than 5V, Rx resistor is required. If the resistor is absent, the drive will be damaged. If the input signal level is 12V, Rx value is 680ohm and 24V, Please use Open Collector Input.

Functions	Pin Number	
	S-SERVO II ST	S-SERVO II MINI
EXT_24VDC	10	20
Alarm Reset	11	14
Enable	12	13

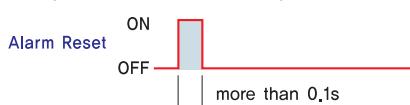

\* S-SERVO II 2X and 3X's pin number is the same as S-SERVO II ST.

#### ◆ Enable Input

This input can be used only to adjust the position by manually moving the motor shaft from the load-side. By setting the signal [ON], the driver cuts off the power supply to the motor. Then, one can manually adjust output position. When setting the signal back to [OFF], the driver resumes the power to the motor and recovers the holding torque. When driving a motor, one needs to set the signal [OFF].

#### ◆ Alarm Reset Input

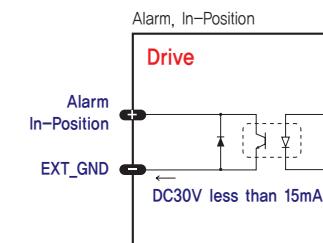

When a protection mode has been activated, a signal to this alarm reset input cancels the Alarm output.

\* By setting the alarm reset input signal [ON], cancel the Alarm output. Before cancel the Alarm output, have to remove the source of alarm.

### 2 Output Signal

Output signals from the driver are photocoupler protected: Alarm, In-Position. The signal indicates the status of internal photocouplers [ON: conduction], [OFF: Non-conduction], not displaying the voltage levels of the signal.

Functions	Pin Number	
	S-SERVO II ST	S-SERVO II MINI
Alarm	13	11
In-Position	14	12
EXT_GND	9	19

\* S-SERVO II 2X and 3X's pin number is the same as S-SERVO II ST.

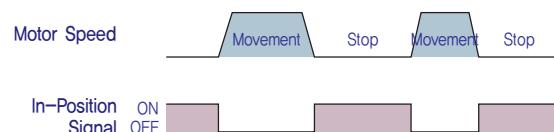

#### ◆ Alarm Output

The Alarm output indicates [ON] when the driver is in abnormal operation. If a protection mode has been activated, it goes [OFF]. A host controller needs to detect this signal and stop sending a motor driving command. When the driver detects an abnormal operation such as overload or over current of the motor, it sets the Alarm output to [OFF], flashes the Alarm LED, disconnect the power to a motor and stops the motor simultaneously.

[Caution] Only at the Alarm output port, the photocoupler isolation is in reverse. When the driver is in normal operation the Alarm output is [ON].

#### ◆ In-Position Output

In-Position signal is [ON] when positioning is completed. This signal is [ON] when the motor position error is within the value set by the switch SW4.

## ● Parameter Settings GUI [User Interface]

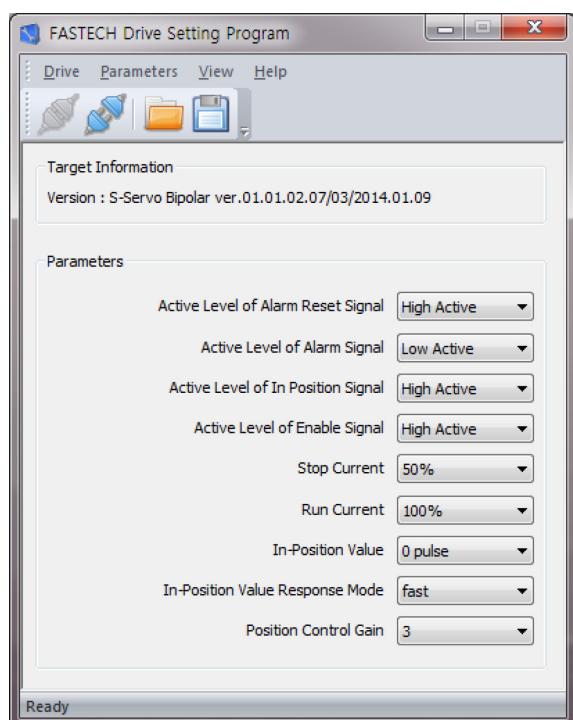

S-SERVOII driver utilizes various parameters for operation.

Some parameters need to be adjusted once users feel inconvenience to use or in order to maximize efficiency. S-SERVOII provides parameter modification program for convenience of product usage for users.

The screen shot as below is computer program (GUI) which used for operation process. Users can change and set the parameters of drive for Enable Level, Alarm Reset Level, In-Position Level, Alarm Output Level. Users can use S-SERVOII according to its own system.

Please connect parameter setting GUI when S-SERVOII is Disable state.

For safety reason, S-SERVOII can not be connected to setting GUI when it is Enable state.

※ Graphic User Interface(GUI) Program can be downloaded from website. ([www.fastech.co.kr](http://www.fastech.co.kr))

※ Graphic User Interface(GUI) Program can support Window XP/7/8/10.

※ Graphic User Interface(GUI) Program can be update without prior notice for improving the performance or convenience of user.
